

Weekly Progress Report

Name: Lav Kush

Domain: Core Java Internship

Date of submission: May 4, 2026

Week Ending: 02

I. Overview: This week, the primary focus was on deepening my understanding of Core Java fundamentals, specifically regarding Java's architecture and essential Object-Oriented Programming (OOP) concepts. Efforts were also focused on validating this knowledge through formal assessment and testing.

II. Achievements:

1. Core Java Fundamentals Familiarization:

- Successfully completed the learning module "Why java is platform independent", gaining a clear understanding of the JVM architecture and bytecode execution.
- Successfully completed "Test Your Knowledge JAVA : Quiz-1" covering critical Java concepts.
- Demonstrated clear understanding of Object-Oriented principles, including inheritance (the extends keyword) and access modifiers (the default modifier for package-private access).
- Proved proficiency in Java keywords and memory management, specifically the usage of static for instance-independent access and final for defining constants and preventing inheritance/overriding.
- Successfully answered questions regarding control flow (break statements), basic data structures (Last-In-First-Out Stack principles), String immutability (concat methods), and integer division mechanics.

III. Challenges and Hurdles:

1. Nuances of Java Syntax:

- Encountered slight conceptual challenges when differentiating between the behavior of mutable objects versus immutable objects like Strings (e.g., understanding why `str.concat()` doesn't change the original string without reassignment).
- Resolution: Carefully reviewed fundamental Java documentation regarding string manipulation and object references to ensure accurate quiz answers and long-term understanding.

IV. Learning Resources:

1. Internship Platform Modules:

- Utilized the platform's Week-2 video/text resources to learn about platform independence.
- Engaged with the interactive "Test Your Knowledge JAVA : Quiz-1" module to practically apply theoretical concepts.

V. Next Week's Goals:

1. Advanced Java Concepts:

- Progress to Week-3 modules to explore more complex Java functionalities and data structures.

2. Project Integration:

- Begin applying the OOP concepts tested this week (like inheritance, static variables, and access modifiers) into the actual codebase of the assigned Core Java Internship projects

VI. Additional Comments:

Completing the first comprehensive Java quiz was a highly valuable experience this week. It solidified my theoretical understanding of basic syntax, keyword purposes, and Object-Oriented principles, providing a strong foundation as I move toward more complex development tasks in the coming weeks.
