

Weekly Progress Report

Name: Lav Kush

Domain: Core Java Internship

Date of submission: May 18, 2026

Week Ending: 03

I. Overview: This week, the primary focus shifted toward deepening my theoretical understanding of Java through structured reading. The core objective was to explore the assigned textbook, "Introduction to Programming Using Java," to reinforce the foundational concepts and object-oriented principles covered in previous weeks and build a stronger base for upcoming project work.

II. Achievements:

1. Textbook Familiarization & Study:

- Initiated a comprehensive study of the assigned e-book, *Introduction to Programming Using Java* by David J. Eck (Hobart and William Smith Colleges).
- Reviewed the introductory chapters to solidify my understanding of programming environments, variables, and the fundamental building blocks of Java applications.
- Successfully correlated the theoretical explanations in the text with the practical coding exercises and quizzes completed during Week 1 and Week 2.

III. Challenges and Hurdles:

1. Adapting to Textbook Versioning:

- Encountered a minor challenge regarding the version of the provided text (Version 5.0, published in 2006/2007). Some of the specific examples or environmental setups reflect an older era of Java development compared to modern IDEs and newer Java releases.
- **Resolution:** I overcame this by actively cross-referencing the core concepts (which remain fundamentally unchanged) with modern Java documentation

(Java 8+) to ensure I am learning industry-current practices while still absorbing the valuable foundational logic provided by the author.

IV. Learning Resources:

1. Core E-book:

- *Introduction to Programming Using Java* (Version 5.0, December 2006, with minor corrections, November 2007) authored by David J. Eck.

V. Next Week's Goals:

1. Advanced Reading & Application:

- Progress into the intermediate chapters of the textbook, focusing specifically on complex Object-Oriented Programming (OOP) concepts, exception handling, and data structures.

2. Project Integration:

- Transition from theoretical study back into practical application by starting the initial coding phases of the Core Java Internship Projects, utilizing the deeper understanding gained from this week's reading.

VI. Additional Comments:

Spending this week focused on a comprehensive academic textbook provided a much deeper theoretical grounding than standard video lectures. It has helped clarify the "why" behind Java's structural rules, which will be highly beneficial as I move on to building actual projects in the coming weeks.
