

Weekly Progress Report

Name: Lav Kush

Domain: Core Java Internship

Date of submission: May 24, 2026

Week Ending: 04

I. Overview:

This week, the primary focus was on mastering advanced Object-Oriented Programming (OOP) concepts in Java, specifically focusing on abstraction and polymorphism. The goal was to understand how to design flexible and reusable code structures and to validate this knowledge through the second comprehensive quiz.

II. Achievements:

1. Mastering Abstraction:

- Successfully completed the learning modules on "Interface in JAVA" and "Abstract class in JAVA".
- Gained a clear understanding of how to achieve full and partial abstraction, and learned how interfaces are used to establish contracts for classes and simulate multiple inheritance in Java.

2. Exploring Polymorphism:

- Completed the module on "Method overloading in java", solidifying my understanding of compile-time polymorphism and how to create multiple methods with the same name but different parameter lists to enhance code readability.
3. Knowledge Assessment (Quiz-2 Completion):
- Successfully passed "Test Your Knowledge JAVA : Quiz-2", validating my theoretical and practical understanding of interfaces, abstract classes, and method overloading.

III. Challenges and Hurdles:

1. Distinguishing Abstraction Methods:

- Encountered an initial challenge in fully grasping the nuanced differences and specific use cases between an Abstract Class and an Interface, especially regarding when to implement which design pattern in a real-world scenario.
- **Resolution:** Addressed this by writing small, practical code snippets for both concepts side-by-side. Comparing their behaviours (like constructor presence in abstract classes vs. standard interfaces) helped clarify their distinct roles.

IV. Learning Resources:

1. Internship Platform Modules:

- Utilized the platform's Week-4 video lectures focusing on core OOP principles.
- Engaged with the interactive "Test Your Knowledge JAVA : Quiz-2" module to practically assess the week's learning.

V. Next Week's Goals:

1. Advanced Java Concepts:

- Progress to the next set of modules, potentially covering Exception Handling or the Collections Framework, which are essential for robust application development.

2. Project Integration:

- Begin planning how to implement these abstraction techniques (interfaces and abstract classes) into the architecture of the assigned Core Java Internship projects to make the codebase more modular.

VI. Additional Comments:

Completing Quiz-2 was highly beneficial for solidifying the concepts of abstraction and method overloading. Understanding how to properly structure classes using interfaces and abstract classes has given me a much better perspective on how large-scale Java applications are architected.
